Understanding Dementia: Person- Centred Care

(25702)

Course Description

This course is designed to train the learner in how to provide good person-centred care to people living with dementia. It also provides behavioural training in how to care for and support people living with dementia.

Kineo's dementia-focused 'Person-Centred Care' online learning course is a key part of aged care professional development. This course is designed to fit in with any organisation's training mix. The course can be used as a part of Kineo's Understanding Dementia suite or as a standalone title. The course has a Further Resources sub-menu that can be used for professional development and those that want to take a deeper-dive into the subject.

This online learning course is designed to align with the Aged Care Quality Standards. It has been developed in collaboration with experts, including Kineo clients working in the aged care sector, to ensure the course is fit-for-purpose. They're still the same person. They just live with dementia now.

Person-centred care is treating someone as a person first. It means providing care in a way that is specific to them by taking into account their unique wants, needs, likes, dislikes, strengths and weaknesses.

Learning Outcome

This course focusses on the following learning outcomes:

- What person-centred care is.
- The importance of practising person-centred care.
- What person-centred care might look like in practice.
- The importance of taking care of yourself.

Audience and Duration

Course is designed specifically for carers and other health professionals who provide care for a person/people living with dementia.

The online learning is applicable to learners in residential aged care services, home services and flexible care services. This course is suitable for new and experienced carers.
